Health IT standards and interoperability
Chair: Dr Peter Mackisaac

The use of standards supports almost everything we do and “E or D-Health” is no exception.
Australia has been an active participant in IT standards development and implementation. This session is for those relatively new to health informatics, and the more experienced to discuss the standards landscape, where to look and who to ask. Traditionally being involved in standards is a place to be exposed to the tried and tested, the cutting edge and people who are making it happen.

As the US healthcare system evolves and moves from a fee-for-service model to value-based models, there is increasing pressure to fully exploit all avenues to support this transition. In this session, we explore some of the key solutions being used to optimise clinical outcomes, financial performance and maximise productivity and to realise our vision of healthcare delivery transformation which moves beyond the four walls of the clinic.
